NRO review(s) completed.

at something like 180 miles, low resolution, etc. Now it strikes George that if somebody is going to come up with two more C's, the best way to do things would be as follows:

- a. Give the two to NRO to manage this would give them eight to fly instead of the present six.
- b. NRO would then accept ERTS requirements and pro-rate them among the eight and everybody would benefit - intell, MC&G, and ERTS.
- c. The ERTS film-share could be sent to to process for appropriate resolution sanitization-degradation, etc., etc.
